

Project Topic 5: Analyze OTT Platform Viewing Patterns to Support Data-Driven Content Decisions (*MediaTech*)

Context:

An OTT streaming company has planned to expand its market presence by analyzing user engagement and retention patterns across multiple platforms (NetStream, AmazePrime, DizPlay+). To support this initiative, the company has curated a comprehensive dataset that includes content metadata, user profiles, viewing activity, subscription details, and feedback records. Your role as a data analyst is to explore and analyze this dataset to help the company answer the aspects such as:

Business Objective 1: To identify high-engagement genres, languages, and platforms to guide content acquisition and curation.

Sample of Business Questions

- Which genres, languages, and platforms have the highest engagement?
- How does content age (release year) affect popularity and completion rates?

Business Objective 2: To understand viewing habits across demographics, regions, devices, and time slots to personalize experiences.

Sample of Business Questions

- What are the viewing habits across different age groups, regions, and devices?
- Which time-of-day slots show peak engagement?

Business Objective 3: To analyze subscription types, engagement levels, and feedback to uncover drivers of renewal vs. churn.

Sample of Business Questions

- What factors (subscription type, engagement level, feedback) influence renewal vs. churn?
- How do Premium vs. Basic users differ in retention patterns?

Business Objective 4: To leverage user ratings and reviews to evaluate content success and its correlation with completion and rewatch patterns.

Sample of Business Questions

- Which content receives the most positive ratings and likes?
- How do user ratings correlate with completion percentage and rewatch behavior?
